COMMENTS TO AUTHORS

This is an interesting comment on a recent publication. The Authors use the Papilla of Vater as a surrogate to suggest a potential higher diagnostic yield of the last generation of small bowel capsule endoscopy. This is very intriguing. Nevertheless, I would suggest to add a comment to clarify that the higher Papilla visualization rate does not translate directly to a higher diagnostic yield since other factors (i.e transit times, cleansing level etc) might affect the SB3 diagnostic yield.

COMMENTS TO AUTHORS

Please eliminate "PillCam? SB3 didn't had a significantly higher completion rate than PillCam? SB2 (98.6%vs 96%, p=0.62) - unpublished data[7]." Also papilla is the correct spelling

COMMENTS TO AUTHORS

Interesting finding with the suggestion of clear improvement of the diagnostic yield of the PillCam capsule. However, still in 67% of patients the papilla is not visualised, so the real diagnostic yield in capsule endoscopy is still to be discussed...
