Pure transvaginal natural orifice transluminal endoscopic surgery right hemicolecotomy for colon cancer: A case report

Song Z *et al.* Pure vNOTES for colon cancer

Abstract

BACKGROUND

Pure natural orifice transluminal endoscopic surgery (NOTES) for colorectal cancer is a complex procedure and rarely used in clinical practice because of the ethical concerns and technical challenges, including loss of triangulation, in-line orientation, and instrument collision. Transvaginal (v)NOTES, however, can overcome these technical challenges. We report a case of pure vNOTES right hemicolecotomy for colon cancer, attached with surgical video
