

Supplementary Figure 1 The maximum standardized uptake value [SUVmax] of the lesions and surrounding tissues.

Supplementary Figure 2 No abnormal ^{18}F -fluorodeoxyglucose uptake was observed in the sellar region. A: PET: Positron emission tomography; B: Computed tomography; C: Fusion. PET: Positron emission tomography; CT: Computed tomography.

Supplementary Figure 3 No recurrence was observed on brain magnetic resonance imaging at the 12-mo follow-up. A: T1-weighted images; B: T2-weighted images; C: T1-weighted images with contrast.
