COMMENTS TO AUTHORS

Dear authors, nice and interesting review. Please correct dyskinesia with dyskinesis. Dyskinesia does not exist. Please update literature about scapular dyskinesis. Best regards

COMMENTS TO AUTHORS

This paper is overall an excellent review article with thorough document verification and detailed explanation. However, I would like to recommend a few things to complement the paper from the perspective of the reader. In the introduction part, it would be great if there were comments about the prevalence in public, in throwing athletes sport, or the types of throwing sports in which prevalence most common, etc. In my opinion, such information could be a big help in real practice. In the pathophysiology part, it would be helpful if there were detailed description of the mechanism of how internal impingement occurs in kinetic chain. In the physical examination part, it would be good if there were clear explanation that depicts it with photos or illustrations. In radiologic evaluation part, typical cases showing x-ray findings such as “Bennett Lesion” and pathologic MRI findings would be a great help. The treatment part was lacking detailed description of conservative treatment despite its key role in the treatment of this disease. For example, it would be helpful if there were more descriptions or illustrations on how the sleeper stretch or scapular stabilization exercise is performed. Furthermore, it would be good to add an explanation on rehabilitation program, for

example, the period of time to perform stretching to a real patient before converting to strengthening, or whether they should be performed simultaneously.
