18-Fluoro-deoxyglucose uptake in inflammatory hepatic adenoma: A case report

Willy Liu, Jean Delwaide, Noella Bletard, Philippe Delvenne, Paul Meunier, Roland Hustinx, Olivier Detry

Abstract

Positron emission tomography computed tomography (PET-CT) using 18-Fluoro-deoxyglucose (^{18}F FDG) is an imaging modality that reflects cellular glucose metabolism. Most cancers show an uptake of ^{18}F FDG and benign tumors do not usually behave in such a way. The authors report herein the
