COMMENTS TO AUTHORS

Non celiac GS can manifest with extraintestinal manifestations and the manuscript is mostly covering these aspects. However, I am missing two aspects in this review, the precise Oxford level of evidence, which does not seem it has been mentioned and the confusing topic of demyelinating neuropathy associated with NCGS. The first is important to address to make your review sounding. The second should be investigated searching if regions of the globe with high density of multiple sclerosis present an increased ratio of NCGS.

COMMENTS TO AUTHORS

Losurdo et al. reviewed the literature and wrote Extra-intestinal manifestations of non celiac gluten sensitivity. the proposed that similarly to celiac disease, it shows a systemic involvement, therefore several extra-intestinal manifestations have been hypothesized and investigated in many studies. this is very interesting study. I really enjoyed to read it. I have minor comment: Some parts are explain other GRD like CD and DH and WA. please change the title accordingly. Also add the diagram for the study design. change the table and high and low correlation put in spereat column

COMMENTS TO AUTHORS

This is a concise review of an interesting topic, NCGS. The manuscript is well-written and covers the spectrum of extra-intestinal manifestations and disease associations of NCGS. I have the following comments/suggestions for the Authors: 1. The key words should include "gluten-related disorders". 2. The Authors should clarify the difference between disease "association" and disease "manifestations"; actually, table 1 should be divided accordingly. 3. A table summarizing studies examining the role of gluten and wheat in IBS should be added. 4. Another table illustrating prevalence studies of individuals avoiding gluten-based products should be added.
