#### **SPECIFIC COMMENTS TO AUTHORS**

In this study, the authors developed a nomogram for predicting the depression of senior citizens living alone while focusing on perceived social support. They concluded that the experiences of suicidal urge over the past year, dissatisfaction with help from neighbors, subjective loneliness, age, and low self-esteem were significant predictors of depression of the senior citizens living alone. Comments: 1. Please provide sensitivity, specificity, accuracy, NPV, and PPV to the ROC curve; 2. Could the authors provide the calibration curves to the nomogram?
