PEER-REVIEW REPORT

Name of journal: *World Journal of Gastrointestinal Oncology*

Manuscript NO: 78483

Title: Anti-silencing function 1B knockdown suppresses the malignant phenotype of colorectal cancer by inactivating the phosphatidylinositol 3-kinase/AKT pathway

Provenance and peer review: Unsolicited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 00505755

Position: Editorial Board

Academic degree: PhD

Professional title: Senior Research Fellow

Reviewer’s Country/Territory: Japan

Author’s Country/Territory: China

Manuscript submission date: 2022-06-29

SPECIFIC COMMENTS TO AUTHORS
The study demonstrates that ASF1B may contribute in the malignant phenotype of colorectal cancer via PI3K/AKT pathway. Figure 2 may be revised to indicate the differences between sh-ASF1B#1 and sh-ASFB#2 in the legend.

SPECIFIC COMMENTS TO AUTHORS
The study by Yu et al. investigates the role of ASF1B silencing in the progression of colorectal cancer. The authors investigated the differential expression of ASF1B in colorectal cancer and found that it is upregulated, and high expression was correlated with worse survival. The authors performed mechanistic studies (in vitro and in vivo) and showed that silencing of ASF1B reduces cell proliferation, and suppressed EMT and stemness. The authors found that AS1B may act through the PI3K/AKT pathway. The aims of this study are interesting and well explored; however, I think several points merit attention before publication at the WJG. Please find attached the file with my comments for consideration of improving the quality of the manuscript.

SPECIFIC COMMENTS TO AUTHORS

This manuscript showed the in vitro display that ASF1B down-regulation distinctly attenuated proliferative, migratory and invasive abilities of HCT116 and SW620 cells, and retarded EMT and stemness of HCT116 and SW620 cells. At the same time, the authors' results in vivo indicated that ASF1B down-regulation suppressed tumor growth of xenograft mice as well as Ki67 expression. Secondly, ASF1B concept in proliferation attenuation in colorectal cancer, has been demonstrated by this manuscript. This study has shown that ASF1B will impact the prognosis of CRC patients.
