De Garegeot hernias, defined as a femoral hernia containing the appendix, are rare. It is even uncommon to have an incarcerated de Garegeot hernia with associated acute appendicitis. We report a case of a 76-year-old female presenting to the emergency department for a right lower quadrant abdominal mass for four days.

Maydl hernia | Radiology Reference Article | Radiopaedia.org
https://radiopaedia.org/articles/maydl-hernia-1
Maydl hernias (alternative plural: herniae) are defined as the presence of two small bowel loops within a single hernial sac, that is, there are two efferent and two afferent loops of bowel, forming a "W" shape. Hence sometimes known as a W hernia or a hernia-in-W. This type of hernia is more prone to strangulation and necrosis. The intervening intra-abdominal loop is also at risk of a closed ...

De Garengeot hernia is defined by the presence of a femoral hernia with incarceration of the appendix. Appendiceal endometriosis is an uncommon association, whereby diagnosis is almost always obtained through the gynecological examination of the surgical piece. We report the case of a 38 year old female patient that presented with abdominal pain, hyporexia, nausea and subfebrile spikes upon...

https://www.semanticscholar.org/paper/De-Garengeot...
Introduction: De Garengeot's hernia, the presence of a vermiform appendix in the femoral hernia sac, is a rare occurrence. Due to the paucity of cases and no large case series yet published, the incidence of De Garengeot's hernia is reported between 0.5–5%. Femoral hernias account for less than 5% of all groin hernias and are three times more common amongst females and amongst the elderly.

We report about a case of a femoral hernia with vermiform appendix herniation presenting without abdominal pain and bowel symptoms. Femoral appendix hernia was first described by Rene Jacques de Garengeot in 1731 [de Garengeot hernia (GH)] and is a rare clinical finding [3]. This condition has been reported in literature, primarily in the form...

Inflamed appendix in a femoral hernial sac: de Garengeot's ...
https://read.qxmd.com/read/19225856
Croissant de Garengeot's hernia is defined as the presence of an appendix in the femoral hernial sac. It is rare and occurs mostly in females. We report this hernia in a male patient along with the surgical management and review of literature.
