Are there new approaches for diagnosis, therapy guidance and outcome prediction of sepsis?

Dubravka Kojic, Benedikt H Siegler, Florian Uhle, Christoph Lichtenstern, Peter P Nawroth, Markus A Weigand, Stefan Hofer, Thorsten Brenner

Abstract

Beside many efforts to improve outcome, sepsis is still one of the most frequent causes of death in critically ill patients. It is the most common condition with high mortality in intensive care units. The complexity of the septic syndrome comprises immunological aspects - i.e. sepsis induced immunosuppression - but is not restricted to this fact in modern concepts. So far, exact mechanisms and variables determining outcome and mortality stay unclear. Since there is no typical risk profile,
