Supplementary Figure 1 Bias risk judgments. A: Graph exhibiting bias risk judgments on bias risk items through reviewers displayed percentage among all included studies. B: Risk of bias sum-marization: Risk of bias item judgment by reviewers for all the included studies.

Supplementary Figure 2 Leave-one-out analysis. A: Sensitivity analysis of the association between positive lymph node ratio (LNR) and overall survival (OS) in gastric cancer patients. B: Sensitivity analysis of the association between Log odds of positive lymph nodes (LODDS) and OS in gastric cancer patients. C: Sensitivity analysis of the association between pathological lymph nodes (pN) and OS in gastric cancer patients.

Supplementary Figure 3 Egger's test results and Trim and Fill results. A: Egger's plot to assess the publication bias effect on the positive lymph node ratio (LNR). B: Egger's plot to assess the publication bias effect on the log odds of positive lymph nodes (LODDS); C: Egger's plot to assess the publication bias effect on the pathological lymph nodes (pN); D: The plot of trim and fill to evaluate the impact of LNR on overall survival (OS); E: The plot of trim and fill to evaluate the impact of LODDS on OS; F: The plot of trim and fill to evaluate the impact of pN on OS.

Supplementary Table 1 Results of lymph node ratio the subgroup meta-analysis

Subgroup	LNR			
	Analysis method	HR (95%CI)	I ² , %	P value
Surgery				
D2	Random	2.63 (1.56-4.42)	87	< 0.001
D1+D2	Random	1.81 (1.37-2.38)	97	< 0.001
Treatment				
NAT	Random	2.30 (1.36-3.90)	72	0.01
Non-NAT	Random	2.03 (1.56-2.66)	97	< 0.001
Population
