SPECIFIC COMMENTS TO AUTHORS

In the present study, Dr. Sotelo MJ et al. reviewed recent advances in the management of early EGFR-mutated NSCLC. Although there is some interesting, there are still some comments for the authors. 1. Except OS analysis, PFS and ORR also should be discussed. 2. I suggest authors add a figure to further describe how EGFR-mutated influence NSCLC. 3. Authors discuss that Adjuvant treatment with first- and second-generation EGFR TKIs, how about the later stages? 4. The introduction is disordered, and Introduction should also briefly mention the purpose of the review. 5. New insights should be more detail, and I think this part is vital. List the points are better. 6. The current obstruction for treating EGFR-mutated NSCLC also should be discussed.
