### SPECIFIC COMMENTS TO AUTHORS
Lv et al. presented two cases of Cronkheite-Canada syndrome. The topic is interested, the syndrome is rare, not-fully understood. The presentations of cases are in helter-skelter manner and English need to be polished, too. The results of administered Levo-thyroxine treatment are missing. In the Discussion section, when comparing presented cases with literature data, very questionable assertion about Graves disease and negative ATG i ATPOAbs. It is expected to have negative aforementioned antibodies negative, especially in surgically treated patients, but the main clue are TSH receptor antibodies. The text of the manuscript must be improved aiming to be published.

SPECIFIC COMMENTS TO AUTHORS
The authors report a rare presentation of CCS with hypothyroidism and summarize specifics relative to this presentation quite well. They then take it a step further by describing a different case of CCS where they delineate the importance of hormonal therapy.

1. Please modify the manuscript title to reflect the real nature of your report with regards to hypothyroidism.
2. Please ensure proper formatting of the core tip paragraph.
3. The current structure of the case presentation section detailing both cases is confusing to the reader. Please ensure that case presentation is entirely presented for each case. Example: Case 1 describe the whole case including lab, imaging, surgical path etc. and then move on to case 2.
4. Discussion is excellently written. Current case reports are nicely summarized and findings are compared with presenting cases quite well.
5. Please re-write the conclusion. It seems a bit repetitive.
