Name of journal: World Journal of Gastrointestinal Surgery

Manuscript NO: 77502

Title: A personal predictive model based on systemic inflammation markers for estimation of postoperative pancreatic fistula following pancreaticoduodenectomy

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 05382551

Position: Editorial Board

Academic degree: PhD

Professional title: Associate Professor

Reviewer’s Country/Territory: Spain

Author’s Country/Territory: China

Manuscript submission date: 2022-05-03

Reviewer chosen by: AI Technique

Reviewer accepted review: 2022-05-04 04:09

Reviewer performed review: 2022-05-04 05:01

SPECIFIC COMMENTS TO AUTHORS
The article is within the scope of the journal, and deals with an interesting topic. It is well written and structured. It is smooth to read. The experiment described is well designed. The results are displayed and discussed. The contribution of the article represents an advance in the area of knowledge. However, I suggest the following two improvements: a) The state of the art of the problem dealt with should be expanded in the introduction. b) The conclusions should be improved by synthetically indicating what the scientific contribution is and proposing a set of lines of work.

### SPECIFIC COMMENTS TO AUTHORS

Interesting approach to the topic of pancreatic fistula, which is a subject that has been much explored in the literature and still has a lot to learn; surely any attempt to mitigate the problem will always be welcome. Great writing, I suggest using the acronym POPF for pancreatic fistula and PD for pancreaticoduodenectomy.
