Optimizing radiotherapy with immune checkpoint blockade in hepatocellular carcinoma

Choi C *et al.* Combination of RT with ICIs in HCC treatment

Changhoon Choi, Gyu Sang Yoo, Won Kyung Cho, Hee Chul Park

Abstract

¹⁷
 Hepatocellular carcinoma (HCC) is the fifth most common cancer, and its incidence is rapidly increasing in North America and Western Europe as well as South-East Asia. Patients with advanced stage HCC have very poor outcomes; therefore, the discovery of new innovative approaches is urgently needed. Cancer immunotherapy has become a game-changer and revolutionized cancer treatment. A comprehensive understanding of tumor-immune interactions led to the development of immune checkpoint inhibitors (ICIs) as new therapeutic tools, which have been used with
