New era of personalized medicine: ²¹ **Advanced therapy medicinal products in Europe**

Advanced Therapy Medicinal Products in Europe

Abstract

Advanced therapy medicinal products are human medical therapies based on genes, cells, or tissues, and because of their characteristics, they offer new innovative opportunities for the treatment of diseases and injuries, especially disease treatment opportunities for diseases beyond the reach of traditional approaches. These therapies are at the forefront of innovation and have historically been very controversial, although in the last decade they have gained prominence while the number of new advanced therapies has increased every year. In this regard, despite the controversy they may generate, they are expected to dominate the market in the coming decades.
