To
The Editor
World Journal of Stem Cells

Manuscript titled: “Combination of Mesenchymal Stem Cells and 3D Collagen Scaffold Preserves Ventricular Remodeling in Rat Myocardial Infarction Model”

The revised manuscript has been edited extensively by all authors including one of the co-authors who is a faculty member in a US university. Reviewers have pointed out minor language errors and typos. After careful review of the entire manuscript, all grammar errors have been removed. Kindly note that here in Pakistan, the medium of education is English throughout the primary and higher school education as well as in graduate schools. I have published many papers as corresponding author. I hope that you will now find the manuscript appropriate for English language and grammar as well as scientific content.

I thank you for your kind support

Sincerely,

Asmat Salim, PhD
Professor
Stem Cell Research Laboratory
