New targeted therapies in pancreatic cancer

Anișoara Seicovici, Livia Petrusel, Radu Seicovici

Abstract

Patients with pancreatic cancer have a poor prognosis with a median survival of 4-6 months and a 5-year survival of less than 5%. Despite therapy with gemcitabine, patient survival does not exceed 6 months, likely due to natural resistance to gemcitabine. Therefore, it is hoped that more favorable results can be obtained by using guided immunotherapy against molecular targets. This review summarizes the new leading targeted therapies in pancreatic cancers, focusing on passive and
