## COMMENTS TO AUTHORS

Very well written article. Perhaps the authors should include a short section on the clinical significance and current thinking behind the future liver remnant and standardised liver volume.

## COMMENTS TO AUTHORS

This review is mainly managements and treatments of colorectal hepatic metastasis, and well-written. However, this paper has also a few problems. Therefore, I would recommend some revision before publication. 1. This review includes chemotherapy of colorectal hepatic metastasis, therefore, please describe frequency of adverse events more clearly (ie, %). 2. According to performance status of patient, treatments strategy please described. 3. To detect small metastasis, contrast MRI has clinical benefit. Please discuss in your text. 4. `Determination of strategy` and `chemotherapy` section are little confusion. Please add flow chart as Figure, and reduce words counts. 5. In my opinion, I almost accept this paper for publication to WJH.

## COMMENTS TO AUTHORS

In my opinion this is a very good review article that provides useful and practical information for clinicians and everybody in the staff involved with patients with this disease. It explores, in a very clear way, the most important options that nowadays are available for patients with metastatic disease associated with colorectal cancer, a pathology that is very common and frequently is detected in an advanced stage
